CREATE A TEMPLATE

Please follow these instructions carefully.
The more precise and clearer your template is, the better the finished product will be.

1. Photograph each traced section before removing the Mylar templating material.

2. Place the **Mylar templating material** over the area to be templated. **Cut the material** to approximately 20mm larger than the area you are going to template.

3. **Secure the material** in place using masking tape.

4. Surface depending:

    a. **[Factory Non-slip Surface]** Use the pen to **trace a path around the outline of the non-slip surface**. Use a ruler to create a cleaner template. Draw around the radius templates provided (if needed) to create clean corners.

    b. **[Smooth Surface]** Use the pen to **trace your desired decking area.** Use a ruler for a better template. Draw around the radius templates provided (if needed) to create clean corners.

5. **Number** each section. (see #4)

6. **Draw an arrow** pointing to the front or the bow of the boat. (see #5)

7. **Identify areas to be cut out** including hinges or holes. (see #7)

8. If you are **choosing to add a logo**, write "logo here" where it should be. (see #8)

9. **Draw lines from part to part** of your template. (see #9)

10. **Write your details on the template** including full name, email, mobile number. Add also the boat make, boat model, boat year, your chosen colour(s) and pattern. (see #10)

11. **DO NOT CUT** the material to the lines you have templated. We use this extra space in the digitalisation process.

12. Place your template back into the reusable tube the kit arrived in and post it back to us.
